

## ION CLEANSE CLINICAL TRIAL

Dr. Jere Jarrett DC - Family Life Chiropractic - Clearwater, FL  
Ten subjects were used as test samples for the ion cleanse: six females and four males with an age range of 14 to 67. Sessions were done according to the recommendations of the ion cleanse. A sample was sent for evaluation after the unit was running in the water without a subject having their feet in the water. This was the base used to compare to the samples after a subject had a session. Samples were sent for evaluation after the first session, the 5th session and the 10th session for each subject.

Listed are the metals that were shown to be different in the subject's samples as compared to the base. This objective test does show that the metals listed are present in more quantity than in the base sample. This would indicate that the metals came from the person's body.

In addition to the above subjects who did complete their course of treatments, there were some who failed to complete the required sessions, yet their samples still showed objectively that metals show higher in the after session tests than in the base sample of just water. It would appear that even at the first session the ion cleanse is creating a change. This was just a small sample of subjects and some had dramatic changes. The objective findings would indicate that the ion cleanse assists the body to detoxify metals which can result in some dramatic changes in symptoms.

This system does not claim to cure or treat any disease. It assists your body to rebalance its bio-energy fields and stimulates the body for self-detoxification.
